

Devin Amatya dga383

Vidhu Appalaraju vsa267

### Team Project Plan

Both students worked on the code simultaneously for a majority of the lab. Vidhu worked on the main console controller, while Devin worked on the Critter Class methods. Both students debugged the lab for about 5 hours together and spent about 25 hours working on the actual program. Both students worked for a total of 30 to 40 hours on the lab together, while they spent about 2 hours working on the code alone. We used the instructor provided test cases to test our program, and we both created two Critter subclasses each for the lab denoted Critter1, Critter2, Critter3, Critter4. We committed a total of 36 times on Github with about 4 substantial commits each.
